

## ECUACIONES DE PRIMER GRADO

Problema 100:

Resolver

$$\frac{5x - 2}{9} + \frac{x + 10}{3} = -4$$

Solución Problema 100:

$$MDC = 9$$

$$5x - 2 + 3(x + 10) = -4 \cdot 9$$

$$5x - 2 + 3x + 30 = -36$$

$$8x = -36 + 2 - 30$$

$$8x = -64$$

$$x = \frac{-64}{8} = -8$$
