

ECUACIONES DE PRIMER GRADO

Problema 109:

Resolver

$$\frac{2p + 1}{3} - \frac{2p + 2}{4} = 1 - \frac{p - 1}{2}$$

Solución Problema 109:

$$MDC = 12$$

$$8p + 4 - 6p - 6 = 12 - 6p + 6$$

$$8p + 6p - 6p = 12 + 6 - 4 + 6$$

$$8p = 20$$

$$p = \frac{20}{8} = \frac{5}{2}$$
