

## PROBLEMAS DE TRIGONOMETRÍA

Problema 185:

Demostrar que se verifica la siguiente igualdad:

$$\frac{\cos a \cdot \cos 2a}{\cos a - \operatorname{sen} a} + \frac{1}{2} \cdot \operatorname{sen} 2a + \operatorname{sen}^2 a = (\operatorname{sen} a + \cos a)^2$$

Solución Problema 185:

$$\begin{aligned} \frac{\cos a \cdot \cos 2a}{\cos a - \operatorname{sen} a} + \frac{1}{2} \cdot \operatorname{sen} 2a + \operatorname{sen}^2 a &= \frac{\cos a \cdot (\cos^2 a - \operatorname{sen}^2 a)}{\cos a - \operatorname{sen} a} + \frac{1}{2} \cdot \operatorname{sen} 2a + \operatorname{sen}^2 a = \\ &= \frac{\cos a \cdot (\cos a - \operatorname{sen} a) \cdot (\cos a + \operatorname{sen} a)}{\cos a - \operatorname{sen} a} + \frac{1}{2} \cdot \operatorname{sen} 2a + \operatorname{sen}^2 a = \cos a \cdot (\cos a + \operatorname{sen} a) + \frac{1}{2} \cdot \operatorname{sen} 2a + \operatorname{sen}^2 a = \\ &= \cos^2 a + \cos a \cdot \operatorname{sen} a + \frac{1}{2} \cdot 2 \operatorname{sen} a \cdot \cos a + \operatorname{sen}^2 a = \cos^2 a + 2 \operatorname{sen} a \cdot \cos a + \operatorname{sen}^2 a = (\operatorname{sen} a + \cos a)^2 \end{aligned}$$
